(a) Up to and including 1958 average rainfall for each year (represented by 100) is the average over the period 1911–1942. As from 1st January, 1959 a long period average from a selection of representative stations is used.

SEASONAL CONDITIONS, TASMANIA: MARCH, 1964

Rainfall: Most areas of the State received above normal good soaking rains except for the South East and East Coast areas. The best general rainfalls occurred in the last week of the month when good rains were experienced throughout the State. The highest daily fall for the month was experienced during this period when 253 points fell at Lake Leake.

Temperatures: The most significant feature of the temperature pattern for the month was the generally large departures below normal in both maximum and minimum readings throughout the State. The Central Plateau recorded the greatest departures below normal with Bronte Park recording a mean maximum temperature of 60° which was 5° below normal and the lowest mean maximum for ten years.

Crops, Pasture, &c.: The heavy soaking rains during the month materially altered the outlook for crops and pastures with crops making rapid progress. Early frosts in the Central Northwest and North caused some damage to potato crops and pea harvesting was somewhat affected by rain.
